

The AI-Enabled PM Playbook

Everything from the June 27 session, in one document. Download it and keep it.

Experienced project managers do not need another AI tutorial. They need a way to apply judgment they already have to a tool that is changing the shape of the work. This playbook is the reference version of that session: the prompts, the warning signs, the mindset shifts, and the checkpoints, in one place.

WHAT IS INSIDE

- Structured AI prompts for building your own AI agent, including a Chief of Staff working example
- Four AI warning signs, and the corrective move for each
- Four mindset shifts for the AI-enabled PM
- The 30/60/90-day adoption checkpoint framework

WHO THIS IS FOR

Mid-to-senior project managers who bring real judgment, relational intelligence, and pattern recognition to their work, and want a practical way to put AI to use without losing what makes them effective.
